To Whom It May Concern:

It is my understanding that the FCC is considering a waiver for SafeView's SafeScout systems for screening of people at security checkpoints for threat objects. I am aware that these systems are already deployed overseas in foreign government buildings, airports, border crossings, transportation terminals, and military checkpoints.

In the United States, we at the US State Department have evaluated the SafeScout 360 system and based on the evaluation are procuring two units for deployment to our facilities overseas.

I am also aware that the Department of Homeland Security has recently certified the SafeView SafeScout systems as an approved anti-terror technology under the Safety Act, one of only 34 products so approved.

It is logical to me that in the United States, I would expect that these types of devices will someday be used in courthouses, airports, prisons, and government buildings where the end customer will be local and state governments along with commercial entities that will require FCC approval.

While I cannot comment on the technical merit of the waiver, nor that I can endorse a commercial product, I can tell you that I support the deployment of these kinds of technologies to make America a safer place.
